## CHRISTIAN HURTTIENNE ARCHITECTS

Christian Hurttienne Architects specializes in multi-family, commercial, and mixed-use building design through the adaptive re-use of existing structures - often historic, as well as new construction. We believe that a person is a reflective product of the environment within which they interact and inhabit. We are driven to rebuild and creatively design new buildings as citizen architects to improve the current social condition. All members of our firm are LEED accredited professionals trained in sustainable design awareness, strategies and practice. We feel that our built intentions are only successful if our buildings are conscious and respondent to the impact they have upon the natural environment.

Our services include preliminary, schematic, graphic, and interior design; which are further refined through design development and contract administration documentation. We pride ourselves on our vast knowledge of building assemblies, and the broader construction industry. This allows us to translate our experience in owning and operating our construction firm, Christian Hurttienne Construction, into providing exceptional Construction / Contract Administration Services.

We bring many years of experience with the principals of the firm actively participating in City of Detroit activities, the American Institute of Architects, and entrepreneurial initiatives. Our collective goal as individuals is to provide a well-rounded approach to architecture and design as a firm.

The principals of Christian Hurttienne Architects are Christopher Christian and Brian Hurttienne. We will both be involved in the projects as presented by Motor City Match. The primary lead for the projects will be Brian Hurttienne.

### Recent Projects

Bagley / Trumbull Buildings

The Coe at West Village
